Branch: Master & app

## **Application Details**

App Name: Statin Tool

App URL: <https://statin-tool.herokuapp.com/>

App Description: The application we built is a proof of concept. It is straightforward and simple to use. By selecting a particular patient, our app would pull the EHR data from the person and parse. The app will display the basic information of this patient along with a calculated 10-year risk score for a first atherosclerotic cardiovascular disease (ASCVD) event and a recommendation message based on the ASCVD score.
